
a
The two secondary early features
Point, Spearman rho; bar, 5000-sample percentile bootstrap interval;
q, Benjamini-Hochberg across the three prespecified features. n = 111 animals.
Drawn as effect sizes because the frozen bundle exports no per-animal
values for these two features.
Movement RMSSD
Entropy ACF1
q = 0.007 interval excludes zero
q = 0.044 interval excludes zero

Spearman ρ, early feature versus later CombZ
b
The association did not differ detectably by sex
One formal interaction test per early feature,
Benjamini-Hochberg across the three. Zero lies
inside every interval.

c
Sex-stratified estimates, descriptive
Shown because panel b is a negative result. These
are not tests, carry no correction, and may not be
reported as a sex difference.
