

a

RES - CON. Dot = at least one constituent GO term is FDR-supported; it is not a measure of how BROAD that support is, which is tabulated per cell in atlas_support_breadth_audit.csv.
 Colour scale is the manuscript's fixed NES scale (± 2 ; values beyond it take full colour), shared by all three contrast atlases, so they can be compared directly.

b

SUS - CON. Dot = at least one constituent GO term is FDR-supported; it is not a measure of how BROAD that support is, which is tabulated per cell in atlas_support_breadth_audit.csv.
 Colour scale is the manuscript's fixed NES scale (± 2 ; values beyond it take full colour), shared by all three contrast atlases, so they can be compared directly.
