

a

Complete stored bilateral metric inventory for every prespecified anatomical contrast. Main Figure 2f shows only the left-right correlation and the regional-versus-laminar split.

b

Faint lines are individual endpoints; the arrow joins the class medians. Median ICC rises from 0.33 / 0.32 / 0.44 to 0.50 / 0.48 / 0.61 for compartment scores / reference markers / WGCNA modules. 29 of 113 endpoints are not drawn: their variance components were singular or the fit did not converge. Descriptive precision context; no significance test is applied.
